

## Style K7302DL Heavy Duty

### Description:

Cross braided from virgin texturized continuous filament man-made fibres, impregnated with our proprietary Doulon® blended oils and special running-in lubricants.

### Recommended applications:

Highly abrasion resistant Style 7302DL is well suited for heavy duty applications pumping heavy slurries and abrasives in the mining industry. It can be used as anti-extrusion and/or bull rings. This style provides a very durable and conforming packing with good chemical resistance to meet the most demanding applications. It is used within mining, chemical, power generation, paper and pulp feed stock, waste water and sewerage, sugar refineries and general service applications. Rotary, reciprocating and valves

### Service Capabilities:

When used in equipment in good mechanical condition and installed using our product guidelines the under noted values apply:

Temperature Range :	280 °C
pH Range :	2 – 12
Max Pressure :	40* Bar
Max Surface Speed :	20 metres per second

\* Pressure range may vary depending on sliding velocity

Maximum values - temperature, pressure, pH and speed should not be combined in any one application without careful consideration. Common sense balancing of factors is always wise.
