

COMPONENT INTEGRITY MANAGEMENT SYSTEM (CIMS)

high security online database

DATA MANAGEMENT & REPORTING

CIMS DATABASE

essential asset management tool for total facility

The Component Integrity Management System (CIMS) underpins the solutions provided by KLINGER AtmeCo.

CIMS is a high security, client-specific, web-based platform for the capture, reporting and management of all data collected and analysed on behalf of clients for services rendered.

CIMS is an essential management tool that allows an organisations' key individuals such as management, operations and maintenance people to remain fully informed of a facility's performance status. Fully customisable to meet specific client requirements,

CIMS provides a robust suite of asset management modules including asset integrity module, emissions management module and joint integrity management module.

These modules are built on the foundation of maintaining accurate monitoring records, logging conditional follow-up actions and managing and tracking remedial responses. Clients can select the module(s) to suit their specific data and reporting requirements.

KLINGER ATMECO SOLUTIONS INTEGRATION

CIMS integrates the data collected and analysed from the following AtmeCo services to provide a host of reports to enable better decision making for asset and facility performance.

- » Leak detection and repair (LDAR)
- » NDT survey logging
- » Lagging condition surveys
- » Component shutdown work
- » Condition monitoring
- » IR and ultrasonics surveys
- » Steam trap surveys
- » plus all multipoint monitoring

BENEFIT WITH CIMS

secure, around the clock access

- » Web based platform with enterprise level end to end encryption
- » 24/7 client access via multi-level security
- » Wireless connectivity for real-time updates
- » Full component performance tracking & history
- » Instant facility status review at login
- » Client controlled response management protocols
- » Proficient maintenance planning
- » Confirm status of surveys
- » Easy attachment of images or video to data records
- » Unlimited number of authorised users

ABOUT KLINGER ATMECO

For over a decade KLINGER AtmeCo has provided component leak risk management and asset integrity services to various industries, including upstream and downstream oil and gas.

Originally driven by leak detection and repair (LDAR) requirements, the services CIMS supports now extend to many other component integrity applications – each having a separate add-on module within CIMS, however all similarly structured to minimize specific training needs.

CIMS is an essential management tool that allows an organisations' key individuals such as management, operations and maintenance people to remain fully informed of a facility's performance status.

CIMS DATA SECURITY

CIMS is hosted on two Cyberoam units configured in high availability to ensure continuous high bandwidth internet connection to CIMS is maintained at all times.

A comprehensive security portfolio meets complete network and remote office security and endpoint protection requirements. This involves Unified Threat Management (UTM) appliances, SSL VPN solutions, Endpoint Data Protection and Cyberoam iView - Logging and Reporting Appliance, delivering visibility over all user activity through identity-based security controls.

Direct access to dedicated SQL servers are only permitted to approved IP (internet connections), providing extra security.
