

Custom Gland Followers

Replacement gland followers get damaged, and the older the equipment, the more likely a factory casting is no longer available. Further, as some plants decide to remove their mechanical seals, they find the followers have been thrown away.

Klinger are able to supply gland followers for all applications, in any material desired. These followers are of an interlocked design and completely milled, not welded and machined. This process ensures a super high-quality part which fits and performs every time.

As with any product designed to operate in critical operations, this product and its installation must be clearly understood. In addition, the user should have full knowledge of the operating considerations of the equipment in which it is to be installed.

Klinger Ltd, 38 Mc Dowell Street, Welshpool, WA, 6106. Telephone : (8) 92511600. Fax : (8) 93509286
